TCABF

All inclusive package includes:

Airline tickets | Hotel | Food | Transportation | Missions Shirt

Does not includes: souvenirs

Additional dining

Currency: INR - Indian Rupee

Purpose of Mission:

Flood relief Efforts | Humanitarian | Educational | Evangelism

India is the most unreached nation. Hands down. Half a million Indian communities still lack any witnessing body of believers, meaning four out of five Indians will go their entire lives without knowing a single Christian. To see how this compares to the rest of the world, click the magnifying glass at the top of the map.

Nearly 265 million people live on less than \$1.90 per day, left powerless in poverty. Nearly one in four Indians cannot read or

write, hindering day-to-day activities.

When they face life's greatest challenges, millions of Indians are left hopeless and in desperate need of the Savior. More than those in any other nation, the helpless poor of India stand in need of the hope and life that Christ offers.

BEFORE YOU TRAVEL: Check the vaccines and medicines list and visit your doctor (ideally, 4-6 weeks) before your trip to get vaccines or medicines you may need.

Routine vaccines: Make sure you are up-to-date on routine vaccines before every trip. These vaccines include measles-mumps-rubella (MMR) vaccine, diphtheria-tetanus-pertussis vaccine, varicella (chickenpox) vaccine, polio vaccine, and your yearly flu shot.

Hepatitis A: CDC recommends this vaccine because you can get hepatitis A through contaminated food or water in Kenya, regardless of where you are eating or staying.

Polio: Health recommendation: You may need a polio vaccine before your trip to Kenya.

If you were vaccinated against polio as a child but have never had a polio booster dose as an adult, you should get this booster dose. Adults need only one polio booster in their lives (unless you are fulfilling the country requirement listed below).

If you were not completely vaccinated as a child or do not know your vaccination status, talk to your doctor about getting vaccinated.

Country exit requirement: If you plan to be in Kenya for more than 4 weeks, the government of Kenya may require you to show proof of polio vaccination when you are exiting the country. To meet this requirement, you should receive a polio vaccine between 4 weeks and 12 months before the date you are leaving Kenya. Talk to your doctor about whether this requirement applies to you.

Typhoid: You can get typhoid through contaminated food or water in Kenya. CDC recommends this vaccine for most travelers, especially if you are staying with friends or relatives, visiting smaller cities or rural areas, or if you are an adventurous eater.

Hepatitis B: You can get hepatitis B through sexual contact, contaminated needles, and blood products, so CDC recommends this vaccine if you might have sex with a new partner, get a tattoo or piercing, or have any medical procedures.

Malaria: Talk to your doctor about how to prevent malaria while traveling. You may need to take prescription medicine before, during, and after your trip to prevent malaria, especially if you are visiting low-altitude areas.

Meningitis: Kenya is part of the "meningitis belt" of sub-Saharan Africa ([see map](#)). CDC recommends this vaccine if you plan to visit Kenya during the dry season (December–June), when the disease is most common.

Rabies: Rabies can be found in dogs, bats, and other mammals in Kenya, so

CDC recommends this vaccine for the following groups:

Travelers involved in outdoor and other activities (such as camping, hiking, biking, adventure travel, and caving) that put them at risk for animal bites.

People who will be working with or around animals (such as veterinarians, wildlife professionals, and researchers).

People who are taking long trips or moving to Kenya

Children, because they tend to play with animals, might not report bites, and are more likely to have animal bites on their head and neck.

Yellow Fever: Health recommendation: Yellow fever is a risk in certain parts of Kenya, so CDC recommends the yellow fever vaccine for travelers 9 months of age or older to these areas.

Country entry requirement: The government of Kenya requires proof of yellow fever vaccination if you are traveling from a country with risk of yellow fever (this does not include the US - for complete list).
